

Detect fault; es-
tablish safe state
Isolate winding;
preserve dc path

Check surviving-
cell voltage margins
Equation (30)

Yes

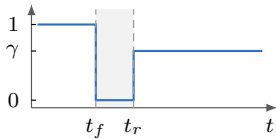

Enforce current, ther-
mal, and winding-
voltage limits
Determine torque-
speed envelope

Reduce bus voltage,
use spare capacity,
or remain shut down

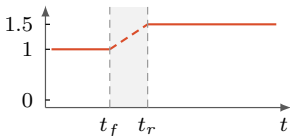

No

Feasible reconfiguration

$$i_{dc}^*/I_0$$

$$V_{dc,k}/(V_{dc}/3)$$

t_f : fault; t_r : resume

$0 < \gamma \leq 1$: fea-
sible current limit
